

Dieter Metz GmbH

Depaneling machines made in Germany

Since 1989 the Dieter Metz GmbH is one of the leading manufacturer of depaneling machines. Our depaneling system is based on the so called pinch-cutting method.

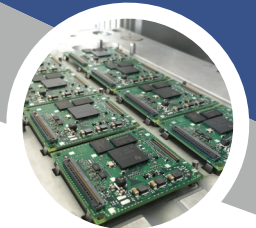

Two simultaneously from top and bottom into the base material entering cutting knives transfer the resulting material displacement not on the PCB but only on the waste strip and grant hereby a considerate and low-tension separation of the PCB in under 6 seconds.

All our cutting tools are delivered on request with detailed measurement protocols. The required stress measurements are carried out in our company during the separation process on the respective cutting tool.

This gives you the confidence to produce only the highest quality with our machines.

We manufacture all machines and tools exclusively at our location in Büchenbach. Quality made in Germany is not just a slogan for us, but the basis of our company philosophy.
