

Smart High-Speed Insertion Machine

The Delta Smart High-Speed Insertion Machine D30 Series is ideal for odd-form parts insertion, which utilizes four industrial cameras to capture synchronized images, and employs AI image recognition for precise positioning.

The D30 adopts Best Fit algorithm to achieve a max. 99.5% insertion rate with lower rejection rates. It offers diverse loading modes to realize non-stop supplementing. Gerber files import and offline programming enable fast integration of new models into the production.

- Fast Component Insertion with Insertion Rate > 99.5%
- Rejection Rate < 1%
- Supports Diverse Feeding Solutions
- Rapid New Product Implementation: Supports Gerber file offline programming & reduces changeover time
