OnFILTER, a U.S. manufacturer of high-performance EMI filters and instrumentation, presents its unique family of patented ground/earthing EMI filters.

GLE04-01, the smallest filter, is designed for internal ESD grounding inside equipment;

GLE30-1 is for the facility and equipment grounding;

DIN-rail **GLV30-1** is for electrical control panels.

OnFILTER' ground EMI filters are highly effective in suppressing EMI, while fully compliant with the safety regulations.

Ground serves as a reference for all equipment at the factory or elsewhere. Unwanted signals, such as high-frequency noise (EMI) on ground cause equipment malfunction, errors, or even damage, and create electrical overstress (EOS) for sensitive components.

OnFILTER shows its ground EMI filters at Productronica 2023 in Hall B2, Booth 518. This is the first time OnFILTER brings its products, that are already popular in North America and in Asia, to Europe

OnFILTER is located in Santa Cruz, California, USA, where all OnFILTER's products are manufactured.
