

## DC EMI Filters from OnFILTER Reduce Errors and Improve Productivity

November 10, 2023

OnFILTER, a U.S. manufacturer of high-performance EMI filters and instrumentation, presents its family of high performance DC EMI filters DCNG series.

**DCNG5003**, OnFILTER' smallest dual DC filter is rated at 3A 50VDC, and **DCNG5009**, a 9A 50VDC model, are for panel mount, while **DVNG5009** packages two independent DC filters rated 9A 50V each in one DIN rail package for electrical control panels.

OnFILTER' DC EMI filters remove EMI from DC power, providing clean supply to sensitive electronics without jeopardizing performance. OnFILTER' proprietary design accomplishes maximum noise suppression of signals polluting DC power lines, removing harmful interference typical for industrial equipment. Clean power is essential for uninterrupted and problem-free operation of electrical and electronic equipment.

OnFILTER shows its ground EMI filters at Productronica 2023 in Hall B2, Booth 518. This is the first time OnFILTER brings its products, that are already popular in North America and in Asia, to Europe

OnFILTER is located in Santa Cruz, California, USA, where all OnFILTER's products are manufactured.
