

Press Release

Motor EMI Filters from OnFILTER Significantly Reduce EMI in Robotics

October 23, 2023

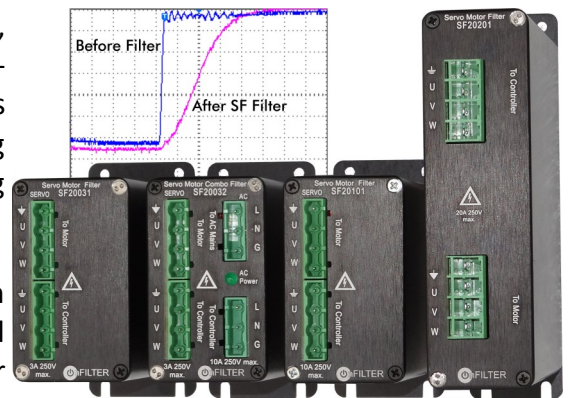

OnFILTER, a U.S. manufacturer of high-performance EMI filters, presents its comprehensive line of EMI filters for PWM motors - servo, stepper, and VFD (variable frequency drive). These motors are the strongest source of EMI in any equipment causing interference with its normal operation, as well as damaging motor's bearing and causing vibrations and loss of precision.

OnFILTER' patented motor EMI filters provide substantial reduction of EMI and ground current in equipment without any mechanical components, changes in software, or maintenance. The motor filters are available in panel or DIN Rail mount.

OnFILTER shows its motor filters at Productronica 2023 in Hall B2, Booth 518. This is the first time OnFILTER brings its products, that are already popular in North America and in Asia, to Europe

OnFILTER is located in Santa Cruz, California, USA, where all OnFILTER's products are manufactured.
